Beauceron Security

Technology alone can't tackle cyber risk

Cyber risk comes from the combination of people, process, culture and technology. Your IT team can't fix it on their own. Solving it means taking a new, comprehensive approach that engages everyone in your organization, from senior management to front-line team members, in the effort. Mariner Security Solutions offers the technology not just to make that possible, but to make it quicker, more affordable, and much easier to do than ever before.

People / Beauceron Security turns the single biggest target in your organization - people - into your most important security asset. The unique approach and individual cyber risk scores help educate and empower your team.

Process / It helps your organization compare your current cyber risk practices against the NIST Cybersecurity Framework, so you can identify gaps in your approach and begin fixing them.

Culture / Tackling cyber risk requires a safety focused culture. Understand how your team members and leaders view cyber risk and provide critical insight on areas of strength, weakness, opportunity and threat.

Technology / Use technology to empower people and to bring balance back to cybersecurity. For too long technology has been used to work around people-focused cyber risk. Beauceron Security's software-as-a-service changes that story.
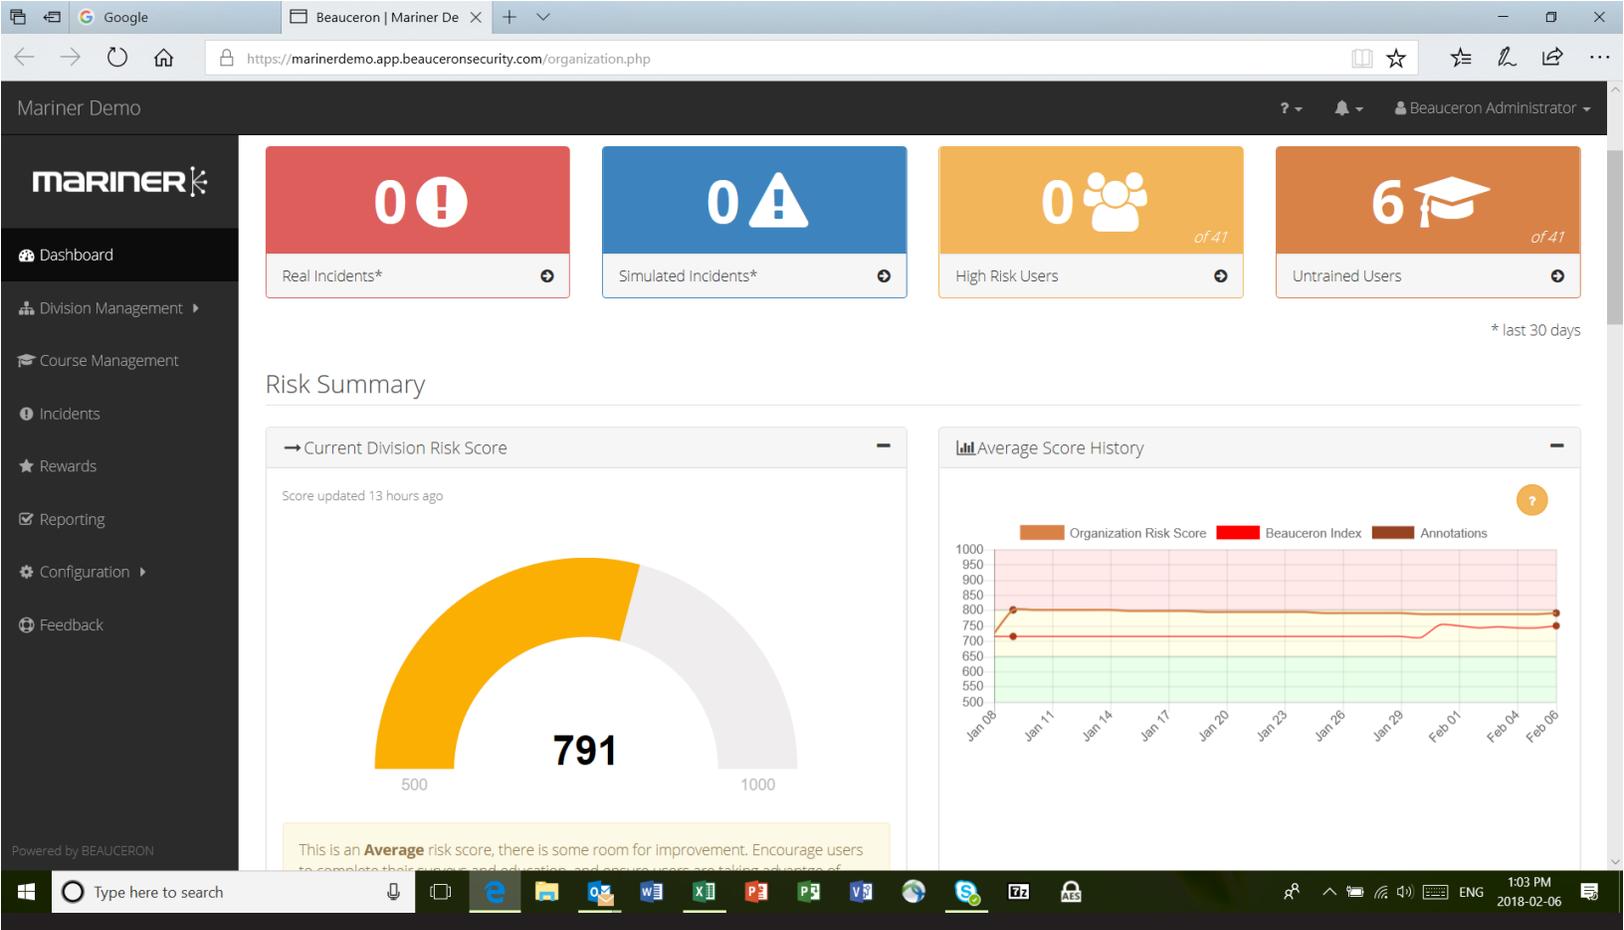

Did you know more than 40% of cyber-attacks are a result of cyber-criminals exploiting unsuspecting and uninformed employees?

Train, manage and monitor your biggest risk – your people with Beauceron Security from Mariner Security Solutions

After using Beauceron Security our customers experience:

- 80% of employees say they're more aware of cybersecurity and their role in protecting their company

- Average cyber crime phishing rates decrease from 25% to less than 8%

- Significant increase in security threats identified by employees

- 60% reduction in IT staff time

- Return on investment of less than one year from internal cost savings for help desk and IT security staff

Beauceron Security was designed from the ground up by cybersecurity professionals confronting rising threats with limited time, budget and human resources. The cloud-based system offers a **complete solution for surveying, education, simulated phishing and scoring your team members**, providing them with insight and tools to better manage their personal cyber risk. **Powerful organizational dashboard** and reports make it easy for every one from IT to HR, to managers and senior leaders to understand what's going on in their organization and to get involved in managing cyber risk.

Awareness to agency

Approach goes beyond security awareness

Individual cyber risk score helps introduce not just accountability but also empowers individuals by giving them the ability to improve their personal cyber risk

Proven approach turns everyone into part of the cybersecurity solution

Insightful analytics

Platform makes it simple to understand the state of cyber risk in your organization

Help you understand who your most risky team members as well as your most risky groups, divisions or departments. Your cyber risk is presented in understandable terms for leaders, team members and IT

Key insights will help your organization prioritize its risk reduction efforts

Easy deployment

Clients can be up and running in a single day, with minimal IT team resources and commitment

Integration with Single Sign On solutions through Office365, Microsoft's ADFS and more make it easy for everyone to get access. Our powerful UserSync feature makes it simple to automatically on-board new team members.
